FIG. 1

Set a passcode on iPhone

For better security, set a passcode that needs to be entered to unlock iPhone when you turn it on or wake it. Setting a passcode also turns on data protection, which encrypts your iPhone data with 256-bit AES encryption. (Some apps may opt out of using data protection.)

FIG. 3

Set up a passcode

1. On iPhone X and later, or iPad with Face ID, go to Settings > Face ID & Passcode. On earlier iPhone models, go to Touch ID & Passcode. On devices without Touch ID, go to Settings > Passcode.
2. Tap Turn Passcode On.

3. Enter a six-digit passcode. Or tap Passcode Options to switch to a four-digit numeric code, a custom numeric code, or a custom alphanumeric code.
4. Enter your passcode again to confirm it and activate it.

FIG. 4

Set up Face ID

Before you set up Face ID, make sure that there isn't anything covering the TrueDepth camera or your face. Face ID is designed to work with glasses and contacts. You can't set up Face ID if anything is obstructing your nose and mouth, like a face mask. Face ID works best when your iPhone or iPad is approximately an arm's length or closer (10-20 inches) from your face.

[Learn which iPhone and iPad models support Face ID.](#)

To set up Face ID:

1. Go to Settings > Face ID & Passcode. If asked, enter your passcode.
2. Tap Set Up Face ID.
3. Make sure that you're holding your device in portrait orientation, position your face in front of your device, and tap Get Started.
4. Position your face inside the frame and gently move your head to complete the circle. If you're unable to move your head, tap Accessibility Options.
5. When you finish the first Face ID scan, tap Continue.
6. Gently move your head to complete the circle for a second time.
7. Tap Done.

If you didn't [set a passcode](#), you'll be asked to create one to use as an alternate way to verify your identity.

To choose features that you want to use Face ID with or reset Face ID, go to Settings > Face ID & Passcode.
